Dan

Here is v2 of the sediment graphs.

As you directed, the maximum of background now excludes data from Station A72.

Also, I fixed a bug in the graph (it was not showing that last data point).

This still needs to be checked (Mark is working on that now).

Based on this revised draft, there are 3 analytes where one or more samples exceeds maximum bkg:

Antimony (#2) at Baker's Bridge River RV Park

Silver (#20) at Baker's Bridge River RV Park

Thallium (#22) at Butch house-river

Lead also exceeds max bkg at Baker's Bridge River RV Park
